What do we mean by private sector for LA/PMs?

The challenges faced by private providers are unique

- Access to appropriate training
- Unsupportive environment
- Limited access to a regular supply of quality affordable products
- Weak demand for LA/PM services

Networks and franchises can address many of these challenges

But what do we do with the huge number of “unorganized” private providers?

Private Clinic Providers Lagos, Nigeria

The majority of private providers are outside of these systems

How can we best support independent private providers to overcome the barriers to provision of LA/PMs?

- Enabling Factors
- Access to Supply
- Demand

Discussion Questions

- What of the approaches are promising, how should they be adapted or scaled?
- What additional approaches should be considered?
- Where is more information/research needed?
